**Fig.1 - 4K Mountains Wallpaper**

Render inline math such as  $ax^2 + bc + c$ .

$$I_{xx} = \int \int_R y^2 f(x, y) \cdot dy dx$$

$$f(x) = \int_{-\infty}^{\infty} \hat{f}(\xi) e^{2\pi i \xi x} d\xi$$

# I am a slide

```
query = results_kafka.writeStream \  
    .format("kafka") \  
    .option("kafka.bootstrap.servers", "localhost:9092") \  
    .option("topic", "predictions") \  
    .option("checkpointLocation", "/home/kayser/temp") \  
    .outputMode("Append") \  
    .start()  
  
time.sleep(30)  
  
query.stop()
```

# Document Title

The usual [Markdown Cheatsheet](#) does not cover some of the more advanced Markdown tricks, but here is one. You can combine verbatim HTML with your Markdown. This is particularly useful for tables. Notice that with **empty separating lines** we can use Markdown inside HTML:

Json 1	Markdown
<pre>{   "id": 1,   "username": "joe",   "email": "joe@example.com",   "order_id": "3544fc0" }</pre>	<pre>{   "id": 5,   "username": "mary",   "email": "mary@example.com",   "order_id": "f7177da" }</pre>

# I am slide

```
// I am code block
```

# I am slide

```
// I am code block
```

# Slide 1 title

Some super quickly created demo slides

- Do not need anything else than markdown
  - Slides title starts with # (also starts a new slide)
  - Bullet points, newlines, empty lines: all standard markdown
- However, can also use other stuff, e.g.:
  - Some HTML (e.g. <center>)
  - When using pandoc beamer, can use latex commands (e.g. \center, \large, etc)\dots

# Slide 2 title

`\center` The slide syntax is so simple that you can quickly create a handful of slides on basically any device in any editor. E.g. on your mobile on the way to the meeting where you need the slides. Right before the meeting starts you use pandoc to create the actual slides from your source.
